Open to relocate: Yes

[Portfolio](#) | [Leetcode](#) | [GitHub](#)

Skills

- **Programming Languages:** Java, C#, JavaScript, Python, SQL.
- **Software Testing Techniques and Tools:** Manual Testing, Automation Testing, API Testing, Database Testing, User Acceptance Testing, Mobile Testing, Selenium, Playwright, TestNG, Junit, Pytest, BDD, SpecFlow, Cucumber, CodeceptJS, Rest Assured, JMeter, SOAPUI, Postman, TestSprite, Evomaster.
- **Machine Learning:** Pandas, NumPy, Random Forest, Flask API Integration, Joblib Model Serialization.
- **Other Technical Skills:** AWS (S3, EC2, CloudWatch, Glue Jobs), Salesforce, Marketo, Git, CI/CD, Jenkins, Docker, Agile, JIRA, Confluence, Claude, Copilot, MS Office.
- **Soft Skills:** Attention to Detail, Interpersonal, Creativity, Teamwork, Problem-Solving, Proofreading, Cross-Functional Collaboration.

Work Experience

Client – BigCommerce (Employer – Teksyncsoft Inc), Austin, TX, USA (Remote)

Projects: EIP & EDM, Quality Engineer

June 2024 – Present

Testing Techniques & Tools: Java, Selenium, TestNG, AWS (Glue, S3, Athena, CloudWatch), Salesforce, Marketo, HubSpot, Snowflake, Data Lake, ETL Testing, Python, JavaScript, Playwright, BDD, SOQL, Salesforce REST APIs, Testsprite, Evomaster, Git, Visual Studio.

Project Description: The **Enterprise Integration Platform (EIP)** enables end-to-end data synchronization across **Legacy Salesforce, TFM Salesforce, AWS, Marketo, and Data Lake** through Impartner portal, Salesforce trigger-based events, and **AWS event-driven pipelines**, supporting real-time data movement across CRM and marketing systems. The **Enterprise Data Migration (EDM)** project focuses on migrating enterprise data from **Legacy Salesforce and HubSpot** to the **TFM Salesforce** platform through controlled flows, using **AWS** as an intermediate processing layer to ensure accurate and validated consolidation of customer data.

- Enhance and maintain an existing automation framework using **Java, Selenium, TestNG**, and **Page Object Model (POM)** to validate **BigCommerce** forms and company portal workflows.
- Integrate the framework with **AWS Athena** to extract backend data and validate it against **Marketo** records, ensuring data consistency across BC forms, AWS, and Marketo.
- Perform **SIT validation across 25+ Salesforce objects** (Account, Contact, Opportunity, Case, Events, etc.) using **Playwright**, ensuring accurate sync between Legacy SF and TFM SF.
- Validate **real-time data synchronization**, ensuring create/update/delete actions in Legacy Salesforce are accurately reflected in TFM Salesforce via **AWS event processing** (CloudWatch monitored flows).
- Test integrations from multiple sources including **Makeswift, Feedonomics, and BigCommerce**, ensuring accurate data flow across Legacy SF → AWS → TFM SF → Marketo → Data Lake.
- Monitor and analyze failures using **AWS CloudWatch logs**, identifying root causes and collaborating with cross-functional teams for timely resolution.
- Lead **end-to-end migration validation** for two flows: Legacy Salesforce → AWS → TFM Salesforce and HubSpot → Snowflake → AWS → TFM Salesforce.
- Validate migration of **300K+ Account (parent) records and 1M+ child object records** using a **Python-based validation framework**, ensuring data completeness and accuracy across systems.
- Perform data validation using **Salesforce REST APIs and SOQL queries**, comparing Legacy SF vs TFM SF data, and reconcile **Snowflake** datasets with TFM Salesforce for the HubSpot flow.
- Verify **AWS Glue jobs and S3-based SQL scripts** used for extraction and transformation and build **Python automation** for migration documentation and audit reporting (**~70% effort reduction**).

Company - ZenQ (A Qualitest Company), Hyderabad, India (Onsite)

Project: NIAD Systems & Technical Tool Boxes, SDET

January 2021 – July 2023

Testing Techniques & Tools: Automation Testing, API Testing, C#, Spec-Flow, Playwright, Git, NUnit, NuGet, Selenium, Visual Studio, Git, Postman, Rest Assured, TestRail, JIRA, Confluence.

Project Description: NIAD is a cutting-edge platform, for managing issues that is mainly utilized in Syndication and Equity Capital Markets. It streamlines new issue processes to boost efficiency and improve business profitability. Technical Toolboxes is a known provider of comprehensive pipeline software and technical training, for professionals in pipeline engineering.

- Enhanced the existing **automation framework** by developing **reusable methods and utilities**, and created **automated test scripts** using **Selenium, C#, and SpecFlow** to improve **test coverage, code reusability, and maintainability** across the QA team.
- Developed and maintained automated test scripts using **Playwright**, improving test coverage and ensuring stability of critical application workflows.
- Performed regression, smoke, and functional testing using **Playwright**, logged defects, and collaborated with developers for timely issue resolution.
- Verifying that **API requests and responses** met the **specifications**, including **response body, status codes, headers, and data formats**.
- Implementing **parallel testing** using **8 threads**, significantly reducing the overall testing duration.
- Conducting cross-browser testing to ensure application compatibility across various web browsers, identifying and resolving **inconsistencies** to improve **user experience**.
- Verifying each requirement and executed **Equivalence Class Partitioning, Boundary Value Analysis, Decision Table, and State Transition** test cases.

Company – TekSpace Inc (Remote)

Project: Asset Vantage, Automation Test Engineer

May 2020 - December 2020

Testing Techniques & Tools: Manual Testing, Automation Testing, CI/CD, JIRA, TestRail, Confluence, Selenium, Eclipse, Java, Git, Cucumber, Jenkins & J-Unit

Project Description: Asset Vantage offers a cloud-based software platform, for managing assets handling accounting tasks and generating reports. It offers services to individual wealthy families as well as professionals.

- Executed manual and automated tests, managed **Automation Test Scripts** utilizing **Selenium WebDriver, Java, and JUnit** to conduct thorough **quality testing** in support of client services.
- Collaborated closely with **cross-functional teams**, including developers and business stakeholders, to analyze code changes, assess testing impact, and ensure early defect detection.
- Analyzed and promptly communicated **test results** to facilitate the resolution of identified defects, ensuring the application's quality is maintained.
- Managed **defect lifecycle using JIRA**, including logging, tracking, prioritization, and retesting, ensuring timely closure and high-quality deliverables.

Education

Saint Louis University, St. Louis, Missouri, USA

May 2025

Master of Science in Information Systems

GPA: 3.9/4.0

Adikavi Nannaya University, Rajamahendravaram, Andhra Pradesh, India

Sept 2020

Bachelor of Technology in Electronics and Instrumentation Engineering

GPA: 7.66/10.0

Academic Project

Project: Health Predict - AI-Powered Disease Risk Assessment Tool

January 2025 – May 2025

Tools & Frameworks: Python (Flask, Random Forest, pandas, NumPy, joblib), HTML, CSS, JavaScript, and Git

- Developed an **AI-powered disease risk prediction tool**, analyzing user health metrics (age, BMI, smoking status) and returning potential disease risks with probability scores.
- Built the complete backend with **Flask REST APIs**, performing data preprocessing using **pandas/NumPy** and model training and serialization with **joblib** for real-time predictions.
- Designed and developed a responsive frontend using **HTML, CSS, and JavaScript**, integrating forms with asynchronous API calls to display prediction results dynamically.
- Implemented a **location-based hospital finder** using **pandas and Flask**, filtering CSV datasets by city and rendering results in interactive HTML tables.
